Educational Recommendations:

Focus on exploring lifestyle triggers, allergies, and compliance in future sessions.

III. CONSULTATION SUMMARY

Chief Complaint: N/A

Timeline: N/A

Symptoms Discussed:

History Collected:

IV. DIALOGUE TRANSCRIPT

Patient: Hi doctor, I am Elena Marquez. I am here today because of some issues.

Clinician: Hello, please tell me what brings you in today.

Patient: I've been having increasing shortness of breath and a tight feeling in my chest over the last three weeks, especially when I have to climb a couple of flights of stairs.

Clinician: what is your problem ?

Patient: No, I haven't had any lung-related therapy or treatments before this.

Clinician: did you have lung therapy before ?

Patient: I haven't taken montelukast before, doctor. If you think it would help, I'm happy to follow your recommendation.

Clinician: take montelukast tablets daily before bed

Clinician: do it as I say. also nebulize yourself daily before sleeping

Patient: Okay, I'll start taking montelukast each night as you recommend, and I'll use the nebulizer before I go to sleep. Could you let me know the exact dosage and how often I should use the nebulizer?

Clinician: are you a smoker ?

Patient: Yes, I do smoke. I usually have about half a pack of cigarettes each day, although I try to cut back when I'm feeling unwell.
